MOLECOR® PRESENTS ITS NOVELTIES IN THE SALON INTERNATIONAL "CARREFOUR DE L'EAU" FRANCE

- ***This event gets together the most important professionals in the water sector on 27 and 28 January in Rennes – France***

Molecor®, Leader Company specialized in the development of technology applying Molecular Orientation to Pipeline solutions, has been present on 27 and 28 January in the International Salon "Carrefour l'eau" in which the most important professionals in the water sector all over Europe meet.

This international exhibition involves 300 exhibitors, attracts more than 9.000 visitors, and offers more than 50 lectures on topics related to the different stages of the water cycle. **Molecor** has presented its novelties in the stand.

Sustainability is a key concept for **Molecor** within its activity, therefore, we are committed to a sustainable production respecting the environment and preventing pollution manufacturing **TOM® PVC-O** pipes, the greenest pipe in the market, due to the improved efficiency, greater energy savings and a reduced environmental footprint, thus contributing effectively to global sustainable development.

TOM® PVC-O pipes offer the best solution for the conveyance of water under pressure thanks to advantages such as: high impact resistance, higher hydraulic capacity, better behavior against water hammer, high chemical resistance, complete watertight, lower pressure drop and easier installation.

These pipes are produced in a wide range of nominal pressures (12.5, 16, 20 and 25 bar) and diameters (from 90 to 800mm). **Molecor®** is the first Company in the world to manufacture DN500, DN630 and DN800 mm pipes in PVC-O.

MOLECOR® presents its novelties in the SALON international "**CARREFOUR DE L'EAU**" France this event brings together the most important professionals of the sector of water on 27 and 28 January in Rennes - France

Molecor® is a leader company specialized in the development of the latest technology applying molecular orientation to pipeline solutions with astonishing mechanical properties. Founded in 2006 by highly skilled engineers in this field, with a proven experience in the plastic pipe division, this revolutionary developed process provides reliable and user friendly systems that widen the pipe global business possibilities. Molecor® activity is developed in two divisions, **Molecor® Tech** and **Molecor® Canalizaciones**, with an effective connection which results in mutual benefits.
