

PRESS RELEASE

Madrid, April 4th, 2016

MOLECOR[®] will start producing PVC-O Pipes in South Africa this year

Molecor[®], the acknowledged world leader in the development of **Molecular Orientated PVC-O** technology in pipeline solutions for the conveyance of water under pressure, will start manufacturing **TOM[®] PVC-O pipes** in South Africa, during 2016.

Molecor[®] and our partner **Sizabantu Piping Systems Pty Ltd** have been developing this market for past few years and have successfully supplied hundreds of kilometers of **TOM[®] PVC-O Pipes** manufactured by **Molecor[®]**, which are fully compliant and certified in accordance with the **South African standard SANS 16422 specification**.

Due to the market opportunities in this area and to the great acceptance of the product, the company decided to invest in this African country forming a joint venture with the company **Sizabantu Piping Systems (PTY) LTD**.

The new factory will be located in Richards Bay (KwaZulu-Natal region) and it will manufacture the **TOM[®] PVC-O technology Pipes** under license to **Molecor[®] Technology**, for the Southern African countries.

Sizabantu Piping Systems Pty Ltd is a well-established Piping Solution supply company, which focuses on the Agricultural, Industrial and Civil/Infrastructural Markets. They have a very

experienced Marketing Team and have well positioned operations, to offer the market excellent service.

This operation allows the African company to enter into the bulk water, high pressure and large diameter pipe market manufacturing **PVC-O** pipes with the **Molecor®** groundbreaking technology.

The **Molecor Technology** manufacturing process is an automated continuous process, with individual quality control for each pipe, guaranteeing the reliability of the product throughout the entire useful life.

“Molecor, orienting the future, now in South Africa.”

Molecor® is a leader company specialized in the development of the latest technology applying molecular orientation to pipeline solutions with astonishing mechanical properties. Founded in 2006 by highly skilled engineers in this field, with a proven experience in the plastic pipe division, this revolutionary developed process provides reliable and user friendly systems that widen the pipe global business possibilities. Molecor® activity is developed in two divisions, **Molecor® Tech** and **Molecor® Canalizaciones**, with an effective connection which results in mutual benefits.
